WWW.FUNKE.NL

The ADSC410 & 470 are antennas for automotive use. Because metal parts inside a vehicle can influence the reception of digital terrestrial signals, it is not possible to give an unambiguous installation instruction that is applicable for every type of car. Therefore this instruction describes general guidelines to assure optimal reception in most cases. Nevertheless it is recommendable in particular situations to find the best arrangement by experimental trials.

Install the antenna in a dry place and try to keep it at least 6 cm away from metal parts.

This antenna cannot be used on reflective coated screens or on the heated part of a screen.

Do not install the antenna in a manner that would obstruct the driver's view or allow the cable to interfere with the safe operation of the vehicle controls or with the vehicle safety instructions e.g. seatbelts and airbags.

Check terrestrial network polarization with your network operator.

Be sure the antennae is powered with 5V by the diversity tuner
